Summary

Product Designer based in India with 2 years of experience designing **enterprise SaaS, complex B2B workflows, and multi-brand design systems**.

Experience

Venn | Contract | London, United Kingdom

Lead Product Designer | 03/2026 - 09/2026

Led end-to-end product design for Venn, a location-based social planning app helping friend groups in London find fair meeting points and discover venues from zero to functional product.

- Ran a 3-phase research programme: generative interviews with 7 London-based users (18–26), a 24-response concept validation survey, then a third round targeting behavioural gaps organiser burden, cancellation patterns, and group dynamics.
- Used JTBD framing and behavioural interviews to identify the real job: not "find a venue" but "get everyone to actually show up without the back-and-forth."
- Built a full MVP map in FigJam categorising features by validation strength before a single screen was designed.
- Designed the core app flow across midpoint discovery, per-person travel breakdowns, venue recommendations, smart filters, group coordination, and venue detail pages built web-first for rapid iteration, designed to scale responsively to mobile.
- Made research-driven decisions throughout: per-person travel bars over averaged times, walkability as walk + tube + walk, reschedule-instead-of-cancel gate validated by 75% cancellation rate from survey.
- Built the full visual and UX system venue cards, map states, filters, empty states, modals, onboarding, and UX writing iterated through user and stakeholder feedback.

Etherlabz | India

Junior UX Designer | 04/2025 - 09/2026

Joined Etherlabz, a design and development studio working across SaaS, AI, fintech, and digital products.

- Worked under senior designers, contributing to client and internal product design projects.
- Supported UX projects through wireframing, user flows, prototyping, UI exploration, mockups, and design research.
- Translated product requirements into structured wireframes and prototypes to explore and validate product concepts.
- Created product mockups and visual explorations to communicate concepts clearly to clients and stakeholders.
- Worked within an established design process and contributed to product decisions across different industries and product types.

Etherlabz | India

Product Designer | 10/2025 - 04/2026

Progressed into a full Product Designer role, independently owning product experiences from research and product structure through interaction design, UI, prototyping, and final visual execution.

- Designed **QuoteXai**, an AI-powered SaaS platform that helps agencies create software quotes faster and more reliably.
- Designed the human-in-the-loop workflow across client intake, AI analysis, missing-information detection, clarification questions, review states, and quote preparation.
- Designed the information architecture, intake workflow, AI interaction states, status progression, forms, and dashboard experience.
- Designed **BlackVault**, a cybersecurity platform that helps businesses assess, fix, and continuously monitor their domain, DNS, email, and web security.
- Designed the product experience around security scanning, security grades, findings, prioritised fixes, security controls, monitoring, and security posture tracking.
- Designed dashboards, data visualisations, status states, and interaction patterns to make technical security information easier to understand and act on.

PlutoLabs | India

UX Design Intern | 03/2025 - 04/2025

Worked directly with Manav Gupta, content creator and founder, as the sole designer for a product being developed within Pluto Labs.

- Designed the initial web experience, helping users understand the product, explore its capabilities through demos, and join the early-access waitlist.
- Owned the experience from information architecture and content hierarchy to visual design, responsive layouts, and interaction details.
- Translated an early-stage product concept into a focused web experience that clearly communicated the product's value before launch.
- Collaborated directly with the founder throughout the internship, iterating on the experience as the product and its positioning evolved.

Skills

User Research, Design Systems, CRM , HRtech, Supply Chain, Visual Design, Wireframing, AI Prototyping , Human Experience Design

Education

Bachelor of Technology | India
Kurukshetra University | 07/2028

Nielsen Norman Group
Interaction Design | NN/g UX Certification | 01/2025

Google UX Design Professional Certificate
Google (via Coursera) | 12/2024
